

What Makes BIO for Microsoft Dynamics NAV Unique?

BIO is simply the best investment you can make to leverage the data in your Dynamics NAV ERP. Here's why:

- BIO enables adaptability that matches the NAV platform.
- BIO provides ability to model information outside of the rigid set-ups in NAV.
- Allows you to maximize the usability of NAV dimensions.
- 45 operational, strategic, and financial views available out-of-the-box.
- Cube builder enables a non-technical user to tailor analysis and reporting to organization's and individual's requirements.
- BIO has many advantages over FRx reporting including integration of financial accounting with customer and vendor accounting, graphical analysis, and traffic lighting.
- User can drill through to transaction level.
- Operational analytics help identify issues in near real time and enable non-technical user to explorer cause and effect.
- BIO cuts across the traditional reporting boundaries between Receivables Management, Payables Management, Sales Order Processing, Purchase Order Processing, and Inventory.
- Flexible activity mapping enables almost unlimited operational analysis.
- BIO automatically self-configures to the individual set-up of each company--select the NAV custom dimensions and combine with NAV dimensions you wish to analyze by, then apply the full functionality of BIOVue to create, publish, and interact with user defined views.
